

Controlit Trace Wire is a conductive wire installed around the perimeter of test zones, on top of the waterproofing, designed for testing with Low-Voltage ELD. When the roof membrane is wetted, it completes the electrical circuit across the surface, enabling accurate detection of breaches and therefore supporting Electronic Leak Prevention (ELP) by maintaining permanent testability.

TECHNICAL DATA SHEET

MAKE WATERPROOFING TESTABLE

Material	Stainless Steel
Length	100m
Gauge	14
Strand Core	7 x7
Breaking Strength	167
Weight	1kg

STORE IN A DRY AND CLEAN PLACE!

Made in EU Controlit Factory SIA

Reg. No. 40103987176, +371 27007494
